ABOUT

High energy tech enthusiast, looking for an opportunity to continue growth within an organization as a front end developer. Motivated, self-taught, with a strong ability to learn on the job, communicate well with others, and take initiative on tasks as needed. Experienced in a diverse amount of front-end and back-end technologies, and learning new things daily. Additional background experience in sales, marketing, and customer service.

TECHNICAL SKILLS

Languages & Frameworks: React, Vue, Angular, Ionic, Javascript, Redux, Sass/SCSS, GASP, JQuery, Node.js, Express, MongoDB, PHP, SQL

CMS: Wordpress, Drupal

Other: TypeScript, Git/Github, Bitbucket, Docker, Gulp

EXPERIENCE

Halo Media

Front-end Developer

New York, NY

Feb. 2018 – Present

- Work as part of development teams responsible for managing and developing multiple projects, ranging from high end client requests, to internal tools and websites to improve daily development efficiency.
- Work and communicate with internal and external design and project management teams to understand, meet, and exceed client stories, feature requests, and deadlines.
- Led the development of numerous music artist sites for large record labels, using Drupal, SCSS, Javascript, and GASP to push the framework in place to its limits, while maintaining smooth animations, and working with the design team to improve the design capability and user interface for a unique look and feel to each artist.
- Created, built and improved components as part of an agency wide, version two, design system and component library built with Angular, to be white labeled and used across multiple internal and client-facing projects.
- Responsible for the successful front end development of a time entry mobile application using Ionic with Angular and Cordova, to allow users the ability manage their internal company time entries, use speech recognition to make new entries and retrieve data via specific voice queries.
- Responsible for integrating with a ticket managing API, to produce white labeled registration solutions using React, Redux, and Node.js, that would replace outdated kiosk interfaces, web registration flows, and allow for the use of custom registration themes through a custom drop in widget.

Oliver Wyman

Front-end Developer

New York, NY

Jun. 2020 – November 2020

- Worked as a contractor among a diverse team responsible for handling the front-end and back-end development of multiple applications
- Developed the UI and back end integrations for a COVID-19 return to office application responsible for keeping track of employee symptoms and check ins. Built with Ionic, Angular and NgRx.
- Developed the UI, and back-end integrations for a sales scorecard application with multiple endpoint connections for different product lists, and prices, to generate deal gradings at scale for a manufacturing sales company. Built with Vue, VueX, Node.js.
